Results, 2009 ARRL 160 Meter Contest

Excellent conditions + record participation = maximum fun!

Gary Breed, K9AY

k9ay@k9ay.com

he 2009 ARRL 160 Meter contest (December 4-6) was an historic event! Here are a few numbers that fit into the "maximum fun" equation:

2 — stations breaking the 2000 QSO barrier for the first time ever!

87 — section records broken

95 — stations with more than 1000 QSOs

112 — stations with more than 100 multipliers

1366 — log submissions, another all-time high

Hopefully, good conditions will once again align with the dates of the next ARRL 160 Meter Contest, scheduled for December 3-5, 2010.

Single Operator, High Power

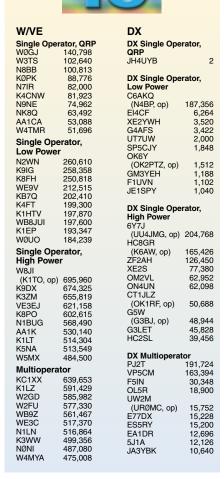

The station of Tom, W8JI, operated by Dan, K1TO, finished in first place with an all-time high 2,046 QSOs. Dan observes, "The top tier of the 160 community has certainly assembled a dazzling array of antennas on FB QTHs..." Fitting that description is John, K9DX, who used his "dazzling array of antennas" to achieve a close second place finish, also surpassing the 2,000 QSO mark.

Third place was gained by Peter, K3ZM, who emphasized working DX and ended up with well over 400 5-point QSOs in his log. Farther north, John, VE3EJ, put in another strong performance to earn a fourth place finish. The battle for fifth and sixth place was fought in the Maine section, with Paul, K8PO, edging out Paul, N1BUG.

The top 12 finishers surpassed the old records for their sections and there were 29 new section records, including some recordsetting performances in the western US from "Tree," N6TR, operating with the club call K7RAT (OR); Ed, W5TM (OK), and George, WØUA, piloting KØRF (CO).

Single Operator, Low Power

Julius, N2WN, repeated his 2008 Low

Power victory with a new Tennessee record, noting, "...my personal best for an ARRL 160." Also repeating as runner-up is Greg, K9IG, who boosted his Indiana record by nearly 25 percent despite persistent local noise.

The remaining Top Ten Low Power finishers represent most of the North Ameri-

can continent from different sections; MI (K8FH), WI (WE9V), MT (KB7Q), KY (K4FT), VA (K1HTV), OH (WB8JUI), EMA (K1EP) and NTX (WØUO).

Single Operator, QRP

Succeeding at QRP power level on the 160 meter band is especially rewarding. Glenn, WØGJ, guided his Bemidji, MN station to a repeat victory. Mike, W3TS continued his successful QRP efforts with a second place finish from Eastern Pennsylvania, with Werner, N8BB in Michigan not far behind in third. Paul, KØPK, joined the Top Ten box with his fourth place finish. Other notable QRP performances were Gary, N7IR (AZ); Jack, K4CNW (SC); Todd, N9NE (WI), and Tom, AA1CA (NH).

Multioperator

The crew of operators at KC1XX was the best of the four northeast US efforts that topped this category, not only winning but raising the US/VE Multioperator record by 41k points. They were followed by teams at K1LZ (EMA), W2GD (SNJ) and W2FU (WNY).

Farther west, WB9Z (IL) captured fifth place, just short of the 2000 QSO mark with 1930 contacts. The highest score west of the Mississippi was made by the operators at NØNI (IA) in ninth place.

DX Results

In North America, 6Y7J, operated by Andy, UU4JMG, was the High Power winner, the top DX score overall and a new North American record. Bob, N4BP, traveled to the Bahamas as C6AKQ in the Low Power category, reaching a new continental record and the overall Top Ten before winds blew down his antenna. VP5CM had an excellent Multioperator score, finishing second among all DX stations.

In South America, the Multioperator entry from PJ2T was tops in that category with

JERRY ROSALIUS, WB9Z

The WB9Z multi-op crew established a new IL Section and Central Division record with 1930 QSOs and 127 multipliers. Top: Jerry, KE9I, Mike, AJ9C, Ralph, K9ZO, Jerry, WB9Z. Foreground: Mike, K9XZ.

HC8GR (operator Steve, K6AW) achieving the second place DX score for High Power.

Europe provided the majority of DX QSOs and multipliers. Leslie, OM2VL's 523 QSOs were enough to beat John, ON4UN's 514 QSOs for the top European in High Power. G5W (operated by G3BJ) and G3LET each worked more than 400 US/VE stations, while CT1JLZ (operated by OK1RF) came close with 390 QSOs. In Low Power, the two best European entries were Niall, EI4CF, and Terry, G4AFS, who managed to make 148 QSOs between them. Mike, F5IN, used the spotting network to reach the top of the European Multioperator list.

Although conditions to Asia were less than stellar in 2009, JH4UYB managed a contact and submitted the only DX QRP entry in the contest. In Low Power, JE1SPY

made 28 QSOs as the top Asian score. JA8NFV was the best High Power entry from Asia, while the crew at JA3YBK pulled 136 US/VE call signs from the noise to be the top Multioperator entry. Several UA9/UAØ stations and JT1CO provided more than 100 DX QSOs and multipliers.

FO8RZ was the only entry from Oceania with just two QSOs, but there were reports of ZL and VK activity. No logs were received from Africa, but a few logs contain QSOs from this continent. Of course, we would like all DX entrants to submit a log for log-checking purposes and to gauge worldwide activity.

Club Competition

The Unlimited Club competition was incredibly close, with the three top clubs having a spread of just 210,000 points out of nearly 7 million. This year's winner is the Yankee Clipper Contest Club, whose 58 entries totaled 6.92M points. Close behind is the Society of Midwest Contesters who had the greatest participation with 76 logs, but hoped for a few more to add to their 6.77M point total. In third, with 6.71M points from 69 entries, was the Potomac Valley Radio Club. The final club to reach the required 50 entries was the Minnesota Wireless Association, with 57 stations represented.

In the Medium Club competition, the 32 logs submitted for the Frankford Radio Club totaled 3.83M points, earning the top spot in this category. The largest group in the Medium Club category was assembled by the Northern California Contest Club, with 44 participants.

Virginia Contest Club at the top spot, with a total of just over 1M points by eight members.

Summary

At the bottom of an extended solar minimum, sooner or later great conditions on the 160 meter band will coincide with a major contest weekend — and that's what happened in 2009! The steady increase in worldwide activity was evident, as well. Many Soapbox comments and Internet group posts talked about "first time" entries, significant station improvements and personal best performances. Scores and participation were at an all-time high.

Good conditions to various parts of the world can occur almost anytime in the solar cycle, and hopefully, will once again align with the dates of a future ARRL 160 Meter Contest. The next event is scheduled for December 3-5, 2010.
